## TIPOLOGIE MECCANISMI PER ORIENTAMENTO LAMELLE

### MANIGLIA/POMOLO A ROTAZIONE (di serie)

Quota maniglia combina funzionalità ed estetica, grazie ad una leva retraibile che permette di regolare l'orientamento delle lamelle dal pomolo.

### LEVA PREMONTATA (di serie)

Installata su porta lamella, dotata di frizione in grado di regolare l'apertura, che assicura la chiusura delle lamelle attraverso un'apposita slitta.

### LEVA PREMONTATA PIEGHEVOLE (opzionale)

Sistema con movimentazione a leva pieghevole installata direttamente sul porta lamella.

### MANIGLIA A ROTAZIONE (opzionale)

Questa maniglia, grazie al sistema rotazionale, è in grado di regolare l'orientamento delle lamelle.
